For students admitted in 2023 and later The Graduate School of Medical Sciences Kumamoto University (Doctoral Course)

Syllabus

Compulsory subjects and Elective subjects

A1 Research Ethics and Biomedical Ethics

- Practice (Jissen) I, II · Practice (Jissen) III Timetable Code List
- B1 Pathophysiology and structural biochemistry of biomolecules
- B2 Cell Biology
- B3 Hematopoietic and Immune System
- B4 Infection and Immune Control
- B5 Neuroscience
- B7 Developmental and Regenerative Medicine
- B8 Environmental and Sociomedical Sciences
- B9 Medical Informatics, Emergency and Disaster Medicine
- C1 Current Theory of Medical Diagnosis
- C2 Advanced therapeutics
- C3 Metabolic and Circulatory Regulations
- C4 Reproductive and Developmental Medicine
- C5 Advances in Oncologic Medicine
- C6 The Forefront of Clinical Oncology
- C7 Restorative Medicine
- C8 Cancer therapeutics
- C9 Paliative Care
- C10 The Theory of Clinical Research
- C11 Training of biostatistics in clinical study
- C12 Overview of clilnical study
- D1 Medical and Life science Seminar
- D2 Learning from Experienced Doctors Seminar
- D3 Medicine and Life Science Training
- D5 International Biomedical Research Seminars English (GSMS)

Course Work subject

Medical Experiment Course

Developmental Biology and Regenerative Medicine

- E1 Special Lecture "Tokuron" on Developmental Biology and Regenerative Medicine I
- E2 Special Lecture "Tokuron" on Developmental Biology and Regenerative Medicine II
- E3 Special Lecture "Tokuron" on Transplantation immunology
- E4 Special Lecture "Tokuron" on Bioethics

Practice "Enshuu" on Developmental Biology and Regenerative Medicine I

Practice "Enshuu" on Developmental Biology and Regenerative Medicine II

Practice "Enshuu" on Developmental Biology and Regenerative Medicine III

Practical Training "Jisshuu" on Developmental Biology and Regenerative Medicine

Educational Program for Advanced Research in Infectious Diseases

and AIDS

F1 Special Lecture I on Infectious Diseases and AIDS
F2 Special Lecture II on Infectious Diseases and AIDS
Training I on Infectious Diseases and AIDS
Training II on Infectious Diseases and AIDS
Practice I on Infectious Diseases and AIDS
Practice II on Infectious Diseases and AIDS
Practice III on Infectious Diseases and AIDS
Practice IV on Infectious Diseases and AIDS
Practice IV on Infectious Diseases and AIDS
Research on Infectious Diseases and AIDS
Special Research I on Infectious Diseases and AIDS
Special Research II on Infectious Diseases and AIDS

Endocrinology and Metabolism Course

Practical Training of Metabolic Medicine

Educational Program for extension of healty life expectacy

G1 Special Lecture I on CMHA
G2 Special Lecture II on CMHA
Special Lecture on Bioethics
Special Practice
Practice I on CMHA
Practice II on CMHA
Practice III on CMHA

Compulsory subjects and Elective subjects

A1

Practice (Jissen) I, II • Practice (Jissen) III

Timetable Code List

Course	e Goals(授業	の目的)							
Course	Learning go 目標)	als(学修	clinical app 【C level (C	nd the detailed findings of the structure, fu lication of biomolecule, and to be able to ap 水準)] ind the structure, function, physiological rol	oply th	em to the s	tudy.		
Course	Outline(授業	(の概要)	learn funda are biopoly are related from the po family prote animals cau of functiona response. F	(1) You will learn the mechanism for the regulation of oxidative stress and its signaling cascades. (2) You will earn fundamental metabolic pathways under normal conditions and its relationship to pathology. (3) Proteins are biopolymers containing functional motifs and domains. Molecular chaperones and ATP-dependent proteases are related to life of proteins and consist of several different types of ATPases. Their functions will be discussed from the point of view of ATPases. In particular, common molecular basis and various cellular functions of AAA family proteins will be discussed. In addition, human genetic diseases and developmental disorders of model animals caused by mutations in AAA family proteins will be described. (4) You will learn how quantity and quality of functional proteins is maintained at the desired levels, and molecular mechanisms of unfolded protein response. Furthermore, you will learn how its disruption is implicated in various diseases. (5)You will learn the role of hypoxia signaling pathway, mTOR signaling pathway in diseases

	Assessment Methods and Criteria(評価方法・基準)			Achievement of the Objectives will be evaluated by active class participation and the reports, of which the theme will be specified after the lectures. Grading will be based on the student's understanding of the course subject matter. The students' understanding will be evaluated on the basis of the reports and brief examinations. Final grades will be based on the average of the best 10 scores of the reports and brief examinations as well as the participation in class discussions.

Course O	Dutline(授業の概要	 medicine. T physiology of social and e Cytoplasmic discussed. The class fo conditions of course is no supported b learn neona 	This class will introduce the most recent and important progress in the field of reproductive and developmental medicine. The lecture related to pregnancy and delivery will discuss medical and social issues in addition to the physiology of reproductive system. We will discuss biological and medical aspect of the reproductive system, and social and ethical problems. The ethical problems of assisted fertilization including in vitro fertilization, ICSI (Intra Cytoplasmic Sperm Injection), oocyte donation, cryopreservation of embryos, cryopreservation of sperm will be discussed. The class for neonatal medicine, we introduce principal physiology of newborn infants and various pathological conditions of this period. The participant will learn many different disorders. One of the important topics of this supported by surrounding environment of children which included social conditions. The participant will also learn neonatal surgical disorders and abdomanal organ transplantation for children. We will discuss the social problems which affect healthy development of children in recent years.

Course	Outline(授業	意の概要)	In this class, the current situation and problems of restorative medicine are explained in terms of both life support and vital function. With continued progress in the field of medicine, critical care medicine has produced a steady flow of success results and its functional prognosis has also improved dramatically. We will introduce new definition and therapeutic strategies of international sepsis guidelines with outline of new clinical research. We will also prov the mechanisms of organ failure from sepsis in basic and clinical viewpoint. Moreover, we will provide lectures regarding risk factors for acute coronary syndrome, which needs urgent therapy, and the progress of surgical treatments for heart failure, ischemic heart diseases, and valvular heart diseases. Although disorders of the skin, bones, and joints are rarely directly life-threatening conditions, they greatly affe a patient's vital functions. We will explain the theory of skin wound healing and the latest molecular biological knowledge, and we will also provide lectures regarding the progress made in the area of skin flaps through studies of blood flow in human skin and discuss reconstructive medicine for the blood vessels, lymph vessels, and nerves in terms of the development of microsurgery.

Enrollment Conditions(履修 条件)	
Assessment Methods and Criteria(評価方法・基準)	Grading will be based on active class participation, paper summaries, and the final report. Grading will be based on the student's understanding of the course subject matter. The students' understanding will be evaluated on the basis of papers dealt with in class to be scored from 0 to 100. Final grades will be based on the average score of the papers as well as participation in class discussions.

Course Out	tline(授業	の概要)	The aims of current lecture are to understand the up-to date treatment for the various types of cancer in addition to standard cancer therapy such as surgery, radiotherapy, chemotherapy and immunotherapy. In late years a guideline is devised every each organ, and maintain the balance of therapy is planned about the cancer.A number of clinical trials are promoted to attempt the standardization of the cancer therapy. You can learn how the standard treatments are confirmed from the results of various clinical trials.

条件)	
Assessment Methods and Criteria(評価方法・基準)	We evaluate the attendance situation to a lecture, lecturing questions and answers and the lecture understanding degree about the matter which we raised to the [the aim of the class] by reports about a theme shown at being finished.Grading will be based on the student's understanding of the course subject matter. The students' understanding will be evaluated on the basis of papers and quizzes related to the topics dealt with in class to be scored from 0 to 100.Final grades will be based on the average score of the papers and quizzes as well as participation in class discussions.

Academic Year 2023, D1 Medicine & Life Science Seminar

Place: Lecture room 2, Medical Education & Library Building 3F. Time & Date: From 17:30 (Usually on Wednesday)

N⁰	Schedule	Talker	Title	Affiliation	Inviter
1	Apr 19 (WED)	KANKI Tomotake	Mitophagy~mitochondrial morphology and quality control ~	Professor, Department of Cellular Physiology, Niigata University Graduate School of Medical and Dental Sciences	Molecular Genetics
2	May 31 (WED)	YOSHIMATSU Yasuhiro	Lymphatic vessels in health and disease	Associate Professor, Division of Pharmacology, Graduate School of Medical and Dental Sciences, Niigata University	Cell Pathology
3	Jun 7 (WED)	NAKAE Susumu	Role of epithelial cell-derived cytokines in allergy	Professor, Graduate School of Integrated Sciences for Life, Hiroshima University	Microbiology
4	Jun 14 (WED)	Ohyama Kaname	Development of pathological research by comprehensive analysis of immune complexes	Professor, Department of Hospital Pharmacy, Nagasaki University	Neuropsychiatry
5	Jun 21 (WED)	GOYAMA Susumu	CRISPR-Cas: biology and its application to blood research	Professor, Division of Molecular Oncology, Graduate School of Frontier Sciences, The University of Tokyo	Transcriptional Regulation in Leukemogenesis
6	Jul 12 (WED)	HIBINO Hiroshi	Interdisciplinary Approaches to Inner Ear Research	Professor, Division of Global Pharmacy Department of Pharmacology Graduate School of Medicine, Osaka University	Sensory and Cognitive Physiology
7	Jul 19 (WED)	OKAMOTO Toru	Virus infection and pathogenesis	Professor, Department of Microbiology, Faculty of Medicine, Juntendo University	Infection and Immunity
8	Aug 9 (WED)	ISHIZU Ayako	Hematopoietic stem cell regulation by extrinsic and metabolic factors	Professor, Dept. Microanatomy and Developmental Biology, Tokyo Women's Medical University	Stem Cell Stress
9	Nov 1 (WED)	FURUSE Mikio	Roles of cell-cell junctions in epithelial barrier function	Professor, Division of Cell Structure, National Institute for Physiological Sciences	Histology
10	Dec 13 (WED)	SUZUKI Motoshi	Therapeutic strategies to target cancer-specific pathways and vulnerability	Professor, Fujita Health Univ, Dep Mol Oncol	Hematopoiesis
11	Jun 31 (WED)	IWAI Kazuhiro	Ubiquitin in signaling: a tale of atypical linear ubiquitin chains	Professor, Department of Molecular and Cellular Physiology, Graduate School of Medicine, Kyoto University	Molecular and Medical Pharmacology

Note: The date, time or place of these lectures may change due to the inviter's and lecturer's schedules. Please check the details with the seminar guide leaflet distributed to each Department beforehand. Also please check our website for the latest information. We might add the seminar other than the above. (http://www.medphas.kumamoto-u.ac.jp/en/medgrad/gakunai/seminar/)

*** Each seminar will be held in English ***

Academic Year 2023, D2 Learning from Experienced Doctors Seminar

Place: Lecture room 2, Medical Education & Library Building 3F. Time & Date: From 17:30 (Usually on Wednesday)

N⁰	Schedule	Talker	Title	Affiliation	Inviter
1	Apr 12 (WED)	MOCHIZUKI Naoki	Understanding Cardiovascular Development by in vivo Imaging using Zebrafish	Director General, Department Head of Cell Biology, National Cerebral and Cardiovascular Center Research Institute (NCVC RI)	Molecular Genetics
2	Apr 26 (WED)	MATSUDA Koichi	Disease biobank and genome research	Professor, Laboratory of Clinical Genome Sequencing Department of Computational biology and Medical Sciences, Graduate school of Frontier Science, The University of Tokyo	Hematopoiesis
3	May 10 (WED)	KOIKE Shinsuke	What we know about psychiatric disorders from human brain MRI studies.	Associate Professor Center for Evolutionary Cognitive Sciences (ECS) at the University of Tokyo	Molecular Brain Science
4	May 17 (WED)	YOSHIMI Akihide	Targeting Aberrant RNA Splicing in Cancer	Chief, Division of Cancer RNA Research, National Cancer Center Research Institute	Transcriptional Regulation in Leukemogenesis
5	Jul 5 (WED)	Kawato Mitsuo	Diagnostic and therapeutic systems based on brain science and AI	Director, ATR Brain Information Communication Research Laboratory Group	Neuropsychiatry
6	Sep 6 (WED)	ITO Toshihiro	Immune mechanism of COVID-19 and its elucidation	Professor, Department of Immunology, Nara Medical University	Infection and Immunity
7	Sep 8 (FRI)	MATSUMOTO Toshihiko	Why do people become addicted?	Director, Department of Drug Dependence Research, National Institute of Mental Health, National Center of Neurology and Psychiatry	Histology
8	Oct 4 (WED)	NAKAYAMA Keiichi	Next Generation Proteomics x AI Revolutionizing Cancer Therapy	Distinguished Professor, Division of Cell Biology, Department of Molecular and Cellular Biology, Medical Institute of Bioregulation, Kyushu University	Molecular and Medical Pharmacology
9	Oct 18 (WED)	SASAKI Hiroyuki	Efforts related to formulating a business continuity plan (BCP) of Tohoku University Hospital	Associate Professor, Division of International Cooperation for Disaster Medicine, International Research Institute of Disaster Science (IRIDeS)	Disaster and Critical Care Medicine

*** Each seminar will be held in Japanese. ***

Approval of Credits of Elective Subject in Doctoral Course,

creditD3 Medicine and Life Science Training (Subject code 22220)

1. In the wake of realization of doctoral course lessons in the graduate school, presentations at academic meetings, such as academic conferences and lecture meetings, under the sponsorship of academic societies and universities, but not under the sponsorship of private organizations will be approved as credits.

2. "D3 Medicine and Life Science Training" is an elective subject in the doctoral course and up to a maximum of 2 credits can be awarded from presentations at academic conferences. (Refer to the list of lecture course/subject and credit in the syllabus.)

3. The criteria for credit approval are stipulated below. In addition, academic meetings that meet the above criteria such as academic conferences, lecture meetings and symposiums, will be judged by the committee of the postgraduate education.

- 1) In international academic meetings such as conferences, meetings, and symposiums, which are held domestically and abroad, or in national conferences and study meetings, which are held domestically, attendance as a leading presenter of a poster or an oral presentation as the first author of the abstract will be approved for a maximum of 2 credits.
- 2) In local academic meetings, such as conferences, lecture meetings and seminars, leading a poster or oral presentation as the first author of the abstract will be approved for a maximum of 1 credit.

For relation of the term of academic meetings and the number of credits to be approved, refer to the detailed regulations as shown in the next page.

4. How to apply for credits and the process of approving credits (The stipulations of this matter and the necessary forms are published on the website for the Graduate School of Medical Sciences and can be downloaded from the website).

- 1) Graduate students should record and submit the necessary information. Record in the prescribed application form (Refer to Format 1) the names of academic meetings, the term of the meetings and reports. Submit the written form to the Educational Affairs Planning Section (Ext. 5029) with 1) a certificate of participation (a copy is acceptable), 2) a copy of the program in which the presentation is published in and 3) a copy of the abstract that the student has published as a leading presenter. In principle, submit the forms within the same academic year as conference participation. The application form will be examined by the committee of the postgraduate education (generally held on every third Wednesday).
- 2) The committee of the postgraduate education will review all submissions and calculate credit based on the detailed regulations (Attachment 1). The credits will be calculated, and when they reach 2 or more, they will be given to SOSEKI by the Educational Affairs Planning Section. Students need to view SOSEKI to check their acquired credits. If the number of credits doesn't reach 2, it will not be approved (0 credits).

- 3) For the credit application, "Kumamoto University" shall be indicated as your affiliation. If your affiliation is not Kumamoto University, your academic supervisor shall be included in your co-speakers.
- 4) A credit application would be accepted by attending a meeting online as well, only when the school educational committee accepts it. A participant certification of such meeting or an approval from the academic supervisor can be submitted for the required submission, 1)-1).

The Detailed Regulations for Approving the Number of Credits in D3 Medicine and Life Science Training

In a faculty meeting on May 28, 2008, it was approved that beginning from the academic year of 2009, students can acquire up to a maximum of 2 credits as D3 Medicine and Life Science Training (which is an elective subject in the doctoral course) by participating in academic meetings as a leading presenter. The detailed regulations of credit approval are stipulated below.

1. Presentations at academic meetings given in 2008 by students who entered in the academic year of 2008 can be approved for credit. However, the application form and the documents that show proof of the students' presentations must be submitted within the 2008 academic year.

2. The relation between the term of academic meetings and the number of credits to be approved is based on the following criteria.

1) The maximum credits will be given for participation in three (3) day academic meetings. "Riron" lecture-style classes, are lecture courses in a subject that consist of fifteen (15) 90-minute sessions (32.5 hours in total). These are worth 2 credits. Academic meetings are generally held from 8 a.m. to 6 p.m. It can be considered that three days participation in academic meetings is equivalent to about thirty (30) hours of study in a regular class.

2) An academic meeting, which is held for half a day should be counted one sixth (1/6) of one credit. For example, one third (1/3) of the stipulated maximum credits should be given by an academic meeting held for one (1) day, a half (1/2) for one and a half $(1 \ 1/2)$ days and two thirds (2/3) for two (2) days.

3) Specific examples of calculating credits:

When a student gives a presentation as the leading presenter at international meetings or domestic national academic meetings held for three days or more, 2 credits should be given. When meetings are held for one day, two thirds (2/3) of one credit will be given, when they are held for one and a half days, one (1) credit should be given, and when they are held for two days, four thirds (4/3) should be given.

When a student gives a presentation as the leading presenter at local academic meetings held for two days, two thirds (2/3) of one credit should be given, when meetings are held for one day, one third (1/3) of one credit should be given and when they are held for half a day, one sixth (1/6) of one credit should be given.

3. When the number of days a student participate in does not match the stipulations above, credits to be awarded will be decided, after deliberations, by the committee of the postgraduate education.

Application Form for Credits of D3 Medicine and Life Science Training: (Presentations at academic meetings)

	App	lication date:	(year/month/day)
Name:	Year	Student number:	Affiliation :
Course name (if applicable)	:	Phone number:	
E-mail address:			
Name of academic meeting:			
Date of meeting (y/m/d):	~	City and venue of	meeting:
Date when the applicant par	ticipated in the	meeting(y/m/d):	∼ (days)
Presenters' names (all):			
Title of the presentation:			(circle one) oral poster
The number of credits to be	applied for app	proval	
(Refer to the detailed regula	tions in Attach	ment 1 about how to ca	lculate): credits
Report about what you have	e learned throug	gh participating in the a	cademic meeting (Write 200 words or
more below.)			

Submit 1) a certificate of participation in the academic meeting (a copy is acceptable), 2) a copy of the program in which the presentation is published in, 3) a copy of the abstract that the student has published as a leading presenter in written form together with this application form to Student Affairs Section. (Screening for approval of credits will be conducted in the committee of the postgraduate education, which is held on every third Wednesday.)

If you have lost the participant certification of the meeting to submit or the meeting was held online, you shall submit Form 2. "Appeal for D3 Medicine and Life Science Training (Conference Presentation)"

(Format 2) Appeal for D3 Medicine and Life Science Training (Conference Presentation)

Academic Year 2023, D5: International Biomedical Research Seminars

•Place: Meeting Lounge, IRCMS 1F (virtual seminars due to the pandemic)

• Time & Date: From 16:00 (usually on Wednesday; may be adjusted due to time difference)

The "D5 International Biomedical Research Seminars" course will be offered by International Research Center for Medical Sciences (IRCMS). It will run from April 2023 to March 2024, with lectures given by scientists who are affiliated with IRCMS or in collaboration with researchers at IRCMS. The lectures will be given in English, and by leading scientists in the relevant research field. Students will be taught: 1) how normal physiological functions are maintained in the human body; 2) how these systems become abnormal under certain pathophysiologic conditions; 3) why stem cells are important in animal development and homeostasis; 4) how stem cell-based approaches can help us understand disease mechanisms and find potential cure for diseases related to stem cell malfunction (e.g., cancer, aging).

No	Schedule	Lecturer	The title for the lecture	Title / Affiliation
1.	April	Ruby Huang	TBA	Professor, School of Medicine, National Taiwan– University, Taiwan
2.	May	Takahiro Masuda	TBA	Professor, Medical Institute of Bioregulation, Kyushu University, Japan
3.	June	Mari Sato	TBA	Associate Professor, Faculty of Dental Medicine, Division of Dental Medicine, Department of Health Science, Hokkaido University, Japan
4.	July	Luis Tiago	TBA	Sir Henry Dale Fellow, Faculty of Medicine, Department of Immunology and Inflammation, Imperial College London, UK
5.	August	Jing Huang	TBA	Senior Investigator, Head, Cancer and Stem Cell Epigenetics Section, Center for Cancer Research, The National Institutes of Health (NIH), USA
6.	September	Akihiko Yoshimura	TBA	Professor, Department of Microbiology and Immunology, Graduate School of Medicine, Keio University, Japan
7.	October	Fanyan Wei	TBA	Professor, Department of Modomics Biology and Medicine, IDAC, Tohoku University, Japan
8.	November	Paul Liu	TBA	Deputy Scientific Director, Head of Oncogenesis and Development Section, The National Institutes of Health (NIH), USA
9.	December	TBA	TBA	
10.	January	Takaaki Akaike	TBA	Professor, Department of Environmental Medicine and Molecular Toxicology, Tohoku University, Japan
11.	February	TBA	TBA	
12.	March	Xin Sun	TBA	Professor, Department of Cell and Developmental Biology, University of California San Diego (UCSD), USA

Note: The schedule or venue of these lectures might change due to various reasons. Please check the details with the seminar guide leaflet distributed to each Department beforehand. Also, please check our website for the latest information. We might add the other seminar than the above.

A report format of "D5: International Biomedical Research Seminars"

Write 2 essays based on 2 talks chosen from the seminar "D5: International Biomedical Research Seminars". Length of the essays should be 250-500 words. "D5: International Biomedical Research Seminars" requires students to attend more than 10 lectures as well as to submit at least 2 reports for credit before completion of their thesis research. Send each essay to the IRCMS within one month by E-mail (ircms@jimu.kumamoto-u.ac.jp, not by hard copy or any other digital media). The file of the essay should be included in the E-mail both in an attached file and in the text. A carbon copy E-mail should be also sent to Medical Faculty Educational Affairs Planning Section (iyg-igaku-3@jimu.kumamoto-u.ac.jp). Attendance will be taken in every talk by signing your name at the entrance of the lecture room.

[Subject code : 26052 (Doctoral Elective Subject)]
*Note that the codes are different for master's and doctoral students.

English (GSMS)

- To improve English language skills, English language proficiency will be assessed and two credits will be awarded according to the CEFR (The Common European Framework of Reference for Languages) standards, which are widely recognized as international standards for language communication skills.
- 2. The University has established English subjects as elective subjects in the Master's and Doctoral Programs of the Graduate School of Medical Sciences, and requires students to take the STEP (Eiken), GTEC/CBT, GTEC for STUDENTs, IELTS, TEAP, TOEFL iBT, TOEFL Junior Comprehensive, or TOEIC/ TOEIC S&W. Credit will be granted by submitting test scores of those tests.
- 3. Level A is defined as C1 level and Level C as B1 level according to the CEFR standards. Evaluation will be based on the following criteria.
 - AA: CEFR C2 level
 - A: CEFR C1 level
 - B: CEFR B2 level
 - C: CEFR B1 level (See Note below)
 - Fail: CEFR A2 level or below

(Note) The CEFR B1 level score will be regarded as 'Fail' if it has not improved from the English score at the time of admission.

4. Conversion of each English test's scores to the CEFR standards will be based on the table approved by the faculty meeting.

5. Evaluation will be made on English scores taken after the second year of the graduate school after a minimum of 90 hours of English study overall, including English conversation in the laboratory and English papers study after entering the graduate school.

(Before starting this course students will be informed of the individual lecture style of instructors in detail.)							
Course	Course Goals(授業の目的)			The aim of this lecture series "Special Lecture II on Infectious Diseases and AIDS" is to learn following topics important for clinical, epidemiological and social science research of infectious diseases: (1) diagnosis and treatment of infections, (2) pathogenesis and complications in infectious diseases, (3) principles in medical statistics, (4) Surveillance and epidemiology in infections at domestic and global levels, (5) prevention of transmission and educational approaches to high risk groups, (6) antiviral drugs and viral resistance to drugs.						
Course Learning goals(学修 目標)			[A level (A水準)] Students will learn following topics important for clinical, epidemiological and social science research of infectious diseases: (1) diagnosis and treatment of infections, (2) pathogenesis and complications in infectious diseases, (3) principles in medical statistics, (4) Surveillance and epidemiology in infections at domestic and global levels, (5) prevention of transmission and educational approaches to high risk groups, (6) antiviral drugs and viral resistance to drugs. [C level (C水準)] Students will learn following topics important for clinical, epidemiological and social science research of infectious diseases: (1) diagnosis and treatment of infections, (2) pathogenesis and complications in infectious diseases, (3) principles in medical statistics, (4) Surveillance and epidemiology in infections at domestic and global levels, (5) prevention of transmission and educational approaches to high risk groups, (6) antiviral drugs and viral resistance to drugs.							
Course Outline(授業の概要)			It would not be an overstatement if we say the history of mankind has been a long history of fight against infectious diseases. Researches on infectious diseases have been contributed enormously to the health and longevity of the life in developed nations at present. Development of diagnosis and treatment strategy against infectious diseases, management of comorbidities and complication, surveillance of infections, understanding epidemics provided a big impact to our society. These accomplishments have been made possible by accumulation and collaboration of research studies in clinical sciences, epidemiology, and social sciences. The up-to-date research results including the lecturers' own experiences will be presented. In addition, students are expected to learn principles of statistical approaches in medical sciences.

Assessment Methods and Criteria(評価方法・基準)	This class consisted of a series of omnibus lectures by 15 lecturers as listed in the schedule. Evaluation will be done based on active class participation, examination test and/or report for subjects by each lecturer. In order to get credits students have to take more than 2/3 lectures. Grading will be based on the average of top 10 scores among ones obtained by the student.

wo classes. Please note				
Students are required to attend more than 10 classes (Journal club) in a single year or in multiple years before completion of Thesis research. Also, students are required to make at least one PowerPoint presentation, and for all other classes, are required to submit essays/reports via Moodle within one week on the paper and presentation of each class. (more than 9 times). You do not need to submit a report for the class in which you present. Attendance will be counted by submitting a report. No final exam will be given.				
Note: Classes that are listed as "being counted as two classes" will be counted as having been attended twice in one attendance/ report, although the end time may be later.
